

INNOVATIVE PACKAGING FOR YOUR CLINICAL TRIALS

DaklaPack Europe B.V. has been successfully active in medical packaging since 1975. And since 1999 we have also been providing additional services in the area of clinical trials and population studies. The reliability of the research material collected is extremely important in population studies and clinical trials. It is essential that the material is treated with the greatest possible care. In 2014, a new entity was established within the DaklaPack Group, which focuses fully on support for these clinical trials and population studies: DaklaPack Clinical Trials.

Full focus on clinical trials and population studies

Setting up clinical trials and population studies is no easy matter. For example, due to legislation and regulations on privacy, and on transporting biological materials. But putting together comprehensible sampling kits (including for self-sampling) and sending and/or personalising these kits is also a complicated job. After all, you want the right person to get the results.

With the right support, the quality of the samples is preserved to the best possible extent. Moreover, samples reach the laboratory in perfect condition. The crucial aspect in this chain is the correct and safe method of transport, and the delivery to the research laboratory. In the laboratory, the samples must be identified quickly and efficiently, and prepared for analysis. In the case of large numbers of analyses, in particular, a simple, error-free processing is necessary.

CLINICAL TRIALS →

Draft

Always a tailor-made concept, geared to your needs and budget within the agreed timetable

ICT

Our smart ICT solutions ensure error-free processes and simpler information provision for your clinical projects

Fulfilment

From envelope filling to storage and distribution, we have the experience to meld everything together into a single smooth operation.

Support

If there are questions, we offer full support within the agreed times

MEDICAL PACKAGING

Medical packaging and products for mailing diagnostic samples have very specific requirements. DaklaPack supplies a specialised range which fully meets international regulations and mail companies' requirements. DaklaPack places the highest value on the safety, ease of use and reliability of its medical postal packaging and similar products.

TAILOR MADE

Are you looking for printed medical packaging, medical packaging in various formats or medical packaging designed according to your wishes? This is possible!

FULFILMENT PARTNER IN NATIONAL POPULATION STUDY ON BOWEL CANCER DAKLAPACK CLINICAL TRIALS

DaklaPack is playing an essential role in the national population study on bowel cancer, which the Health Minister decided to launch the end of 2013. Structuring and implementation of the study fall under the responsibility of the Dutch National Institute for Public Health and the Environment (RIVM). RIVM delegated realisation of this new population study to the five regional screening organisations in the Netherlands. DaklaPack has been commissioned by the screening organisations to produce and send the invitation kit. It developed a methodology for this which rules out errors and guarantees the privacy of participants. The population study, intended for men and women from 55 to 75 years of age, started in January 2014 and is being realised in phases.

Bowel cancer is diagnosed in approximately 13,000 men and women each year. Thanks to the population study, bowel cancer, or an early stage of it, can be discovered early, and treated. If bowel cancer is discovered early, the patient has a better chance of being cured, and the treatment is less severe. In the long term, the population study could prevent approximately 2400 deaths per year. In order to optimise participation in the study, DaklaPack has developed a recognisable and user-friendly invitation kit.

A three-section pouch is sent in a preprinted purple envelope, containing a self-sampling tube for a stool sample, instructions for use, an information folder and an addressed return envelope. Thanks to the use of advanced materials, the total kit is compact and lightweight, keeping postage costs relatively low, despite the high volume of units to be posted.

Following on from the development and production of the invitation kits, the screening organisations instructed DaklaPack also to take care of the logistics processes relating to posting this invitation kit. The screening organisations supply data of citizens, and DaklaPack takes care of posting the kits. The privacy of participants is guaranteed within the logistics process.

The logistics surrounding this population study are extraordinarily complicated, and require the utmost care and accuracy. DaklaPack has shown that it is fully able, as an engaged, full-service marketing partner, to set up and implement an efficient and watertight methodology.
